Question: 1

Which of the following is the MOST relevant security check to be performed before embedding thirdparty libraries in developed code?

- A. Check to see if the third party has resources to create dedicated development and staging environments.
- B. Verify the number of companies that downloaded the third-party code and the number of contributions on the code repository.
- C. Assess existing vulnerabilities affecting the third-parrry code and the remediation efficiency of the libraries' developers.
- D. Read multiple penetration-testing reports for environments running software that reused the library.

Answer: C

Question: 2

The Chief Information Security Officer (CISO) has requested that a third-party vendor provide supporting documents that show proper controls are in place to protect customer data. Which of the following would be BEST for the third-party vendor to provide to the CISO?

- A. GDPR compliance attestation
- B. Cloud Security Alliance materials
- C. SOC 2 Type 2 report
- D. NIST RMF workbooks

Answer: C

Question: 3

A recent audit cited a risk involving numerous low-criticality vulnerabilities created by a web application using a third-party library. The development staff state there are still customers using the application even though it is end of life and it would be a substantial burden to update the application for compatibility with more secure libraries. Which of the following would be the MOST prudent course of action?

- A. Accept the risk if there is a clear road map for timely decommission
- B. Deny the risk due to the end-of-life status of the application.
- C. Use containerization to segment the application from other applications to eliminate the risk

D. Outsource the application to a third-party developer group

Answer: C

Question: 4

Which of the following documents provides expectations at a technical level for quality, availability, and responsibilities?

- A. EOL
- B. SLA
- C. MOU
- D. EOSL

Answer: B

Question: 5

A security analyst is receiving numerous alerts reporting that the response time of an internet-facing application has been degraded. However, the internal network performance was not degraded. Which of the following MOST likely explains this behavior?

- A. DNS poisoning
- B. MAC flooding
- C. DDoS attack
- D. ARP poisoning

Answer: C
