Question: 4

Part of the reason why the APT attack becomes difficult to defend is that it uses the vulnerabilities to

attack. This kind of zero-day hole usually requires flowers
A lot of time to research and analyze and produce corresponding defense methods.

- A. True
- B. False

Answer: A

Question: 5

The following figure shows the configuration of the URL filtering configuration file. Regarding the configuration, which of the following statements is correct?

The screenshot shows the 'URL Filtering Configuration File' dialog box. It contains a table with columns: Name, Allow, Deny, and Action. The table lists various URL categories. The 'Default' category is selected, and its action is set to 'Deny'. The 'Allow' column is checked for the 'Default' category. The 'Deny' column is checked for the 'Default' category. The 'Action' column is set to 'Deny' for the 'Default' category. The 'Default' category is selected in the 'URL Filter' dropdown. The 'URL Filter' dropdown is set to 'URL Filter'.

- A. The firewall will first check the blacklist entries and then the whitelist entries.
- B. Assuming that the user visits the www.example.com website, which belongs to the categories of humanities and social networks at the same time, the user cannot access the website.
- C. The user visits the website www.example.com, and when the black and white list is not hit, the next step is to query the predefined URL category entry.
- D. The default action means that all websites are allowed to visit. So the configuration is wrong here.

Answer: B
