Question: 1

Which approach best supports organizing multiple BigFix Compliance Analytics reports for different departments with unique security baselines?
Response:

A. Group all checklists under a single default domain
B. Use one single administrator with global permissions
C. Create role-based groups and segment reports by computer group
D. Configure only dynamic relevance without roles

Answer: C

Question: 2

Before you install BigFix Compliance components, you must verify that the _____ service is fully operational and reachable by the Compliance application.
Response:

A. Agent Manager
B. Relay Gather
C. WebReports
D. WebReports

Answer: C

Question: 3

How does enabling optional BigFix Compliance domains benefit an enterprise with both Windows and Linux endpoints?
Response:

A. It forces all clients to use a single checklist
B. It allows importing checklists for multiple operating systems and standards
C. It removes the need for agent installation
D. It disables relevance evaluation

Answer: B

Question: 4

You plan to roll out Security Compliance Analytics to a new department. What BigFix resource is essential for properly creating role-based views and filters?
Response:

A. SQL Server stored procedure
B. Compliance exclusion rules
C. User roles within WebReports
D. Console connection to the root server

Answer: C

Question: 5

What two best practices should be followed before upgrading BigFix Compliance to a newer version? (choose two)
Response:

A. Backup the Compliance SQL database
B. Remove all custom checklists
C. Validate WebReports connectivity
D. Reinstall all BigFix relays

Answer: A,C

Question: 6

A BigFix Compliance deployment typically uses _____ as the back-end database platform by default.
Response:

A. Oracle 12c
B. IBM Db2
C. MySQL
D. Microsoft SQL Server

Answer: D

Question: 7

Why might an administrator choose to clone an existing checklist in BigFix Compliance rather than modifying the original directly?
Response:

A. It saves disk space
B. It allows testing changes without altering the production baseline
C. It disables default check scheduling
D. It removes imported SCAP signatures

Answer: B

Question: 8

When deploying the BigFix Client Manager for Endpoint Protection, what is a primary advantage of integrating it with BigFix Compliance?
Response:

A. It can replace the entire BigFix platform
B. It prevents patch deployment tasks from executing
C. It provides enhanced policy enforcement for anti-malware tools
D. It disables local firewall policies

Answer: C

Question: 9

What primary function does the Client Manager for Endpoint Protection serve in BigFix Compliance?
Response:

A. Supports router-level encryption
B. Controls network site-to-site VPN
C. Tracks anti-virus and endpoint protection compliance
D. Forces PCI DSS encryption

Answer: C

Question: 10

Which two steps are essential when first configuring a new checklist for BigFix Compliance?
(choose two)
Response:

A. Enable the domain subscription
B. Remove all previous fixlets
C. Map the checklist to target computer groups
D. Deactivate relay caches

Answer: A,C
