**Version = DEMO**

## Version: 4.0

### Question: 1

Which of the following is a significant cause of failure when using the technology-focused approach to BI Application development?

- A. Users often have difficulty understanding new technology.
- B. New technology often contains internal flaws and errors that affect the delivered solution.
- C. The solution is focused on a single subject area.
- D. Developers often focus on just the data.

**Answer: D**

### Question: 2

The V-Model testing process specifies that developers should both verify and validate each test. Which of the following describes how developers would validate their tests in the design step of the V-model?

- A. Check the design by conducting an assembly test.
- B. Check the design by conducting a component test.
- C. Check the design against the business requirements.
- D. Check the design against the developed components.

**Answer: C**

### Question: 3

Which of the following describes the major steps in the deployment process for a Cognos BI application and their proper order?

- A. Plan, verify, and customize
- B. Move, customize, and verify
- C. Plan, move, and secure
- D. Plan, move, and verify

**Answer: D**

### Question: 4

Which of the following is correct regarding report execution requests?

- A. A low affinity request is directed to the same process that served up the originating low affinity request if the process is available and there is an available high affinity connection.
- B. A low affinity request can be processed using a high affinity connection when a low affinity connection is not available.
- C. An absolute affinity request does not require a connection because it has priority.
- D. A high affinity request can be processed using a low affinity connection if there are no high affinity connections available.

**Answer: D**

**Question: 5**

Which of the following is correct regarding the processing of a PageDown high affinity request?

- A. The request is routed to the same process that served up the originating low affinity request if the process is available and if there is an available high affinity connection.
- B. The request is given priority and is always processed by the same process that served up the originating low affinity request.
- C. The request is load-balanced and is sent to any available dispatcher in the system.
- D. The request is automatically queued and is processed by the first available low affinity connection in the system.

**Answer: A**

**Question: 6**

Which service is required when a user views saved report output?

- A. presentation service
- B. report data service
- C. report service
- D. batch report service

**Answer: A**

**Question: 7**

If anonymous access is disabled, when a user accesses Cognos BI, what is the correct flow of the request?

- A. To Cognos Access Manager which queries the content store for user information and displays the log on page through the dispatcher and the gateway
- B. To the monitoring service which monitors the user authentication request and displays the log on page through the dispatcher and the gateway
- C. To the presentation service which displays the log on page through the dispatcher and the gateway
- D. To Cognos Application Firewall which monitors the user authentication request and displays the log on page through the dispatcher and the gateway

**Answer: C**
