Question: 1

A 38-year-old man presents with acute infection of skin in the leg. Diagnosis of cellulitis has been made. What should be prescribed?

- A. Ceftriaxone + Flucloxacillin
- B. Vancomycin + Metronidazole
- C. Metronidazole + Erythromycin
- D. Ceftriaxone + Terbinafine
- E. Penicillin + Flucloxacillin

Answer: E

Explanation:

Penicillin + Flucloxacillin. Cellulitis is usually caused by bacteria, such as staphylococci or streptoc are commonly present on the skin. So Penicillin + Flucloxacillin should be given.

Question: 2

Hypothyroid patient on thyroxin had anorexia, dry cough and dyspnea& left ventricular dysfunction. She had

normal TSH & T4 levels, Hyperphosphatemia &

hypocalcemi

- a. The diagnosis is:
- A. Hypopituitarism
- B. Primary Hypopituitarism
- C. Secondary Hypopituitarism
- D. Uncontrolled Hypopituitarism

Answer: B

Explanation:

Primary hypoparathyroidism is defined by a low concentration of PTH with a concomitant low calcium level. In pseudo hypoparathyroidism, the serum PTH concentration is elevated as a result of resistance to

PTH caused by mutations in the PTH receptor system. In secondary hypoparathyroidism, the serum PTH concentration is low and the serum calcium concentration is elevated.

Question: 3

Condition not associated with increased alpha fetoprotein:

- A. Myelomeningocele
- B. Down syndrome
- C. Spina bifida
- D. Gastroschisis

Answer: B

Explanation:

Down syndrome associated with DECREASED levels of alpha fetoprotein. Not increased. Reference: https://en.m.wikipedia.org/wiki/Triple_test

Question: 4
